		HARDWARE EVALUATION		
	Select all that apply	***If multiple selections apply please specify each type by team**		
Hardware	☑	Windows Desktop or Laptop		
	☑	Chromebook		
	☑	Thin Client (any type) - Will need replaced when moving to CCaaS solution		
	☐	Other - please specify		
Headset	Note	**Only wired call centre approved headsets are supported** **Wireless equipment and any personal devices (eg ipods) are not supported nor approved by security for use**		
	☑	Jabra 2300 / 2400 / 1500		
	☑	Poly 510 / 520 (with DA75 / 85 adapter)		
	☐	Net Driven ND1800G5		
	☐	Other - please specify - Jabra - ENC010- Astra A10 -JABRA EVOLVE2 30 STEREO USB-C-Logitech- some are using no head set or personal headsets		
		ACCESS EVALUATION		
	Select all that apply	***If multiple selections apply please specify each type by team**		
Type of Access	☑	YubiKey (Black or White) - some are using , some have one but don't use it and others don't have one at all		
	☐	Security Key Other - please list type		
	☑	VPN (Cisco AnyConnect)		
		If yes, specify which VPN Gateway(s) are accessed:		
	☑	VDI (VMWare)		
	☐	TDS (TELUS Desktop Stream)		
	☐	In office directly connected to Internet		
	☐	***Only TIP TSB***-At home: Agents must meet the internet minimum speed of 15/15mbps (upload/download) once logged into VPN/VDI/TDS		
	☐

EVALUATION FORM		
Type of Work	Select all that apply	
	☑	Inbound Voice Calls through an IVR, Call Prompter, or Toll Free Number
	☐	Inbound Voice Calls through a direct extenstion number, or individual phone number
	☑	Manual Outbound calls to contact customers or other teams within TELUS (i.e. dial a number to connect)
	☐	Outbound Campaigns and management - Preview, Progressive, or Predictive
	☑	Back Office / Workitems / Email routing (i.e. Salesforce, SNOW, KANA Email)
	☐	Voicemail either through a shared mailbox or direct dial in extension number
	☑	SMS (1-way, 2-way, through an app or link)
	☑	Chat (internal chats, customer chats)
	☐	Do you take Credit Card Payments, or process any credit checks
Phone	Select all that apply	Do you actively use:
	☑	iWS(Genesys) and Avaya
	☑	Avaya Only for tracking time
	☑	Avaya Only for placing manual outbound calls to customers or other team members
	☑	WWE(Genesys) and SIP Softphone
	☐	Other: currently mulitple phone systems are used
Support	Select all that apply	
	☑	Do you need reporting from the system. If yes, what type of reporting
	☑	Do you need call recording, or a transcript of each call
	☑	Do you need a desktop screen capture
	☑	Do you need the ability to live monitor team members during any type of work interaction
	☑	Will coaching from call recordings or screen capture be needed
	☑	Do you need the ability to track a team members time logged in for the shift
	☑	Is real time monitoring of live queues, workitem buckets, emails, etc needed
	☑	Is the ability to schedule or forecast through for your team needed
	☑	Do you already use a Workforce management tool? If yes, please indicate which one
TD Locations	Select all that apply	

	☑	Does this team use a SOW with TELUS today
	☑	Does this team use VDI to access their TELUS applicattions today
Please provide any additional insights for this team that are available		

	TELUS Digital Team Prime *(Angela Harris)*	***WLS Information***
Channel	Questions	Answers
Voicemail	Which Voicemail platform do you use today: Avaya, Cisco, Business Connect, etc	*NA*
	Please describe how you access your Voicemail today	*NA*
	Were you a part of a Voicemail migration to a new platform within the last calendar year	*NA*
	What is the Cisco and/or Avaya extension and dial in numbers for each team member today	*NA*
	Are your direct contact numbers published anywhere	*NA*
	How do you share the direct numbers with clients	*NA*
	How many VM's does the team receive each month	*NA*
Workitem	What systems do you completed back office, off queue, or task oriented work today: SFDC, SNOW, KANA, etc Please list all that apply	ARS-Remedy (Pending SNOW), SFDC
	Do you complete any of these tasks inside your phone system. Eg) defer tasks, mark done, etc	No
	When completing workitems are you scheduled for them, or do you receive the work in between calls and chats from clients	No
	Do you receive a 'screenpop' in your phone system when a workitem arrives	No
	How many workitems does the team complete each month	
Surveys	What type of surveys do you send to your customers today	FLP,SFDC
	Are these surveys by email, text message, other - please specify	Sms,Email
	Do your surveys tie into team member metrics and/or performance evaluations	Yes
	Who needs access to survey data	Leaders
	How often is the context of the survey updated	Rarely
	How many surveys a month do you send	
	How many surveys a month do you receive back	878
Language	Please list all languages you support	English and French

Business Requirements for WLS Assure Business

Simon Segure & Team

Updated: [date]

Examine the standard CX&S business requirements in this Google spreadsheet,
Track: work volumes if and to accomplish if relevant to WLS Assure PVO's, and confirm and implement to ensure in WLS Assure,

Link to: Genesys Cloud Interoperatorname

ID #	Caller 2	Business Requirement	As a (role)	Goal (I want to...)	Purpose (so that...)	Given (Acceptance Criteria)	Exists Today?	Required?	MoSCoW	Scope	Owner	Notes
1.00		**IVR Requirements**									+ Name	
1.01	Technical	Caller Identification	System	I want to capture the phone number the customer is calling from,	So that the agent can call the customer back if the call drops.	Given a Customer calls in When their phone number is [data] Then the system passes that info over to team member	Yes	Yes	P1 Must Have		Simon Segure	
1.02	Process	Account Information	System	I want to prompt the Customer to enter account number they are calling about.	So that the Customer is routed to the proper sub menu (Consumer, Business, Corporate), reaches / and the proper group of agents.	Given a customer calls in When they enter their account info, Then if the customer has multiple LOB with us, what account they are calling in about.	Yes	Yes	P1 Must Have		Simon Segure	
1.03	Technical	Last cases / ARS tickets	System	I want to find last 10 days of new cases created (SFDC) and ARS tickets numbers generated in the agent's	So that I points have all/possible relevant data when speaking with a customer,	Given a Customer calls in When they are somehow referencing an existing case ticket, Then the system passes the relevant case(s) automatically for the agent	No	Yes	P2 Should Hv		Simon Segure	
1.04	Technical	Screenpop to 3rd party (medical) Future state Case	Agent	I want to be able to see the customer account relationships in the [complexities] when the call comes through the IVR	So that it makes it easy for agents to avoid the customer and the account types up automatically	Given a customer calls in When they enter their information Then the account software persons membership	Yes	Yes	P1 Must Have		Simon Segure	
1.05	Technical	Customer IVR Identification	System	I want the IVR to ask the customer for IVR proactive information to successfully identified	So that the customer is validated and passed IVR Codes to GenCloud and passed whether the IVR has authenticated successfully or not to the team member	Given a customer calls in When they finish identification and authentication Then the customer is allowed to perform changes to their account	Yes	Yes	P1 Must Have		Simon Segure	
1.06	Process	Welcome Message: Top level Broadcast announcements (Holidays, Weather, Outages) - targeting customers based on their data (by phone #) e.g., what product they have	System Admin	I want to be able to record call messages at different IVR locations and queues, at [various] entering customers based on their data (by phone #) e.g., what product they have	So that I can decide when and where to play the message to the Customer	Given a customer calls in When they enter the software broadcast messaging at any location in the IVR flow Then they hear a customize message	Yes	Yes	P1 Must Have		Simon Segure	[AH] Remains in [ENDOT] box
1.07	Technical	IVR Menus & Sub-Menus	System	I want to provide a way for customers to navigate our call center menus as well as groups / menus for specific requests	So that they are able to reach the right department for support/agent group	Given a customer calls in When they enter in conf # Then they can navigate through our menu with ease	Yes	Yes	P1 Must Have		Simon Segure	[AH] Remains in [ENDOT] box
1.08	Technical	Ensure Business Assure customers is unique to ensure it is routed through GenCloud [and Omnichannel]	System	I want to make sure all calls which are to Business Assure will be routed to GenCloud	So that this one of clear between GenCloud and IVR / WAS	Given a customer calls in When they are in the IVR Then they can navigate through our IVR menu with ease	Yes	Yes	P1 Must Have		Simon Segure	
1.09	Technical	CX&S Integration in the box - connector between IVR Vendor and CX&S (L-SKILL)	System	I want to identify the client, reason of the call key words and route it to the right team	So that can identify the customer, reason for the call key words and have it routed to the right team	Given a customer calls in When they enter their IVR and after an intent Then they will be routed through the IVR accordingly	Yes	Yes	P1 Must Have		Simon Segure	[AH] Remains in [ENDOT] box
1.10	Technical	Ensure all entry points for Assure Wellness are routed through Gen-Cloud	System	I want to make sure all calls routed to assure will routed to GenCloud	So that there are no cases/ under between GenCloud and SFDC / WAS Call Flow or calls in etc	Given a customer calls in When they enter their IVR and after an intent Then they will be routed through the IVR accordingly	Yes	Yes	P1 Must Have		Simon Segure	
1.11	Technical	Customer journey - transfers and transfers	Agent	I want to be able to see how many times a call has been transferred (open [and] [ends] [notes, Text, etc.]) on incoming and outgoing transfers) or opposed (how many/various calls in the last 7 days)	So that we understand how many times this Customer has switched so we can ensure the call and issues are resolved [route to an experienced agent]	Given when a Customer has called us When they have been transferred and or have timed or called in multiple times Then they will be [have data] with the agent	No	Yes	P2 Could Have		Simon Segure	[LC]: Follow->Maybe
1.12	Technical	Ability to see agent's [call] details (name, T or HD) on incoming and outgoing transfers	Agent	I want the ability for the agent to see who they are transferring to and from	So that we can coach and monitor behaviour	Given when a Customer has called us When they have been transferred or are transferring to [agent] Then we share over more time [to coach on new, follow-up	No	Yes	P2 Could Have		Simon Segure	
1.13	Technical	Window Timer	Agent	I want to Communicate: minimally through a ticker system to team members [Lookups, IVR callback, Who next transfers to when LOBs]	So that we have a quick method of sharing information to the team members[ability to be modified by Operations/WFM modifying by IVR IDE]	Given when a Customer has called us When help is on in progress Then we share three details with the agent	No	Yes	P2 Could Have		Simon Segure	
1.14	Technical	Language Identification	System	I want to enable customer to either 'listen' or enable based on their selection in the IVR	So that we are servicing the customer in their preferred [any] app	Given a customer calls in When they are authenticated Then they are routed to someone who can help in their preferred language [French or English]	Yes	Yes	P1 Must Have		Simon Segure	
1.15	Technical	Connection ID and Queue name display	Agent	I want to have the ability to see both the connection ID [and] to the call and the queue name that the call is routed on	So that we can do [IVR] investigations and able to understand the customer's journey	Given a customer calls in When they are authenticated Then agents ability to see and the connection ID and queue name is	Yes	Yes	P1 Must Have		Simon Segure	
1.16	Process	Virtual Assistant Implementation	Agent	I want to have an Assure virtual assistant within the IVR	So that we can be customized in the [IVR and not required to be routed to an agent	Given a customer calls in When they are authenticated Then they can have a conversation and get support from a bot	No	Yes	P3 Could Have		Simon Segure	
2.00		**Queue Requirements**									+ Name	
2.01	Business	CX&S Wrap up codes (Updated List)	Agent	I want to have a list of common wrap up codes	So that whom the outcome of the interaction to a common one, all agents have access to the shared wrap up codes	Given an agent is handling an interaction actively [but] for which the outcome is not specific to a small amount (or group of agents) When the interaction needs to be disposed of Then a common list of wrap up codes needs to be made available	Yes	Yes	P2 Should Hv		Simon Segure	[LC]: General + Specific, Do it for all calls
2.02	Technical	Real Time Queue requirements	System	I want to route to multiple Interaction Item source systems (ARS, SFDC, Genesys one etc)	So that I can intelligently route to the proper agent group	Given a customer calls in When the source system passes the information to GenC Then GenC checks and distributes callback to the right group of agents	No	Yes	P2 Should Hv		Simon Segure	
2.03	Business	Queue Activity Live Monitoring	NFM/RM	I want to be monitor agents various states / activities and be [real time agnostic] reference of how conditions are observed,	So that we can manage service levels, coach and performance	Given an agent is logged in to GenC When the agent receives, handles, finishes a call Then it must be able to decide what states the agent is	Yes	Yes	P1 Must Have		Simon Segure	
2.04	Technical	Queue Info: Match original queue priority, not one for one as we do the opening call queue up	System	I want to have [key queues (consolidated), but still retain the attributes / granularity	So that I can still have all/those in different skillset with having [one service] of queues	Given a customer has called us When they have been transferred Then it can target different skillsets,	Yes	Yes	P1 Must Have		Simon Segure	
2.05	Business	Screen Quality Collection Survey	Supervisor	I want to have management oversight option of conducting Agent quality score surveys from Out of the Box, Manager can also [be given to the call if needed	So that I can evaluate agent calls and interactions for whom qualities ensures positive customer experiences, identifies coaching opportunities	Given a TELUS supervisor Manager When I am evaluating an Agent's interaction with a customer Then I should be able to complete the interaction [and end interaction] for the customer	No	Yes	P2 Could Hv		Simon Segure	
2.06	Technical	Screen Recording	Supervisor	I want to capture agent's screens [or parts that they are doing calls] on the call [inbound and outbound]	So that we can identify areas for coaching, performance management [coaching and review] to evaluate calls,	Given a TELUS supervisor Manager When I am evaluating an Agent's interaction with a customer Then I should be able to do different levels of changes based on [any] type	Yes	Yes	P1 Must Have		Simon Segure	[LC]: Onshore: Stores need [to] have this feature enabled [LC]: Offshore: should be enabled [if not, robust required]
2.07	Business	Desktop Cloud Interaction - Supervisor, Agent and Admin screens (Workspaces)	NFM/RM	I want to have different levels of access based on role type	So that we can perform agent coding and schedule changes, easily speeds to: inserting, sick time, [work], training and other [use] states,	Given a TELUS supervisor Manager When I am reviewing [agent schedule and/or making changes Then I should be able to do different levels of changes based on [any] type	Yes	Yes	P1 Must Have		Simon Segure	
2.08	Business	Voice Recording (Audio)	Supervisor	I want to have 100% call recording (inbound and outbound)	So that we can listen to all inbound and outbound calls from agents (including transfers, conferences, consults, etc)	Given a TELUS supervisor Manager When I am evaluating an Agent's interaction with a customer Then I should be able to [and review any calls they have	Yes	Yes	P1 Must Have		Simon Segure	
2.09	Technical	A bridge is built to ensure calls route from legacy common queues (we're doing Gen C IVR). Consumer, then the FD queue and phone number	System	I want the chosen calls are routed to our new Gen C queue	So that calls are not lost in the consumer legacy queue.	Given [an non-partner team in TELUS] When I am trying to transfer a customer who [on Assure to the non-partner] Then they will be able to warn Business whom Assure cross	No	Yes	P1 Must Have		Simon Segure	
2.10	Technical	Supervisor call stats at end of the call. Is [on the] call on IVR? Is agent. Wait time, Talk, ACW	Supervisor	I want to [would] team members to see their call stats in real time,	So that [some members can self coach for improvement for those who are over targets	Given a TELUS team member When I am on the call [IVR], Talk, ACW, over agent time is displayed for that call and the average for all call taken in the same month,	No	Yes	P3 Could Have		Simon Segure	
3.00		**Customer Identification (Assure Requirements)**									+ Name	
3.01	Technical	Use AI to summarize transcription and store into the current state Smart Breakdown/MRS + Assess state (NVM/CASA)	Agent	I want to make it easy to summarize the conversation that occured during the call with the Customer	So that we can use it for our note in Smartsheet or CCMS/NVCM	Given I am an agent When I am reviewing a customer and need to [some a note on the account that summarizes the issue Then I should be able to get an AI summary of the call to use in Salesforce	No	Yes	P3 Could Have		Simon Segure	
3.02	Technical	Whisper Prompt	System	I want to leverage the GenC Whisper Prompt functionality when a customer interaction arrives.	So that the agent receive context or notice of the call before the agent interacts with the customer, Use the beep for CN & Beep & call identifier for TFL	Given I am a an agent When a call is routed to the team member Then the team member is audited by a beep for weight calls and a call identifier for if matching,	No	Yes	P2 Should Hv		Simon Segure	
3.03	Technical	Products Identifications	System	I want the ability to identify all different products that the customer is calling about	So that we can have visibility and ability to transfer calls to another team if required,	Given I am a an agent When a call is routed to an agent Then I should be able to see the issues according to their WOD are presented in case we need to transfer to another department,	Yes	Yes	P1 Must Have		Simon Segure	Similar to what SFDC does with identifying what products we have,
3.04	Technical	priority fraud calls (flyer and possibly)	System	I want the ability to identify priority fraud calls over high[per] there is no queues and report on these / fraud these calls	So that we make it difficult for fraudsters to get through or they are flagged to agents if calls go into [a] for heighted awareness. This would be focused on the removal [be,	Given a TELUS agent When a call is routed to the team member Then Present the team member with a pop up box warning this call may be a fraud call based on specific call behaviour by the entity, [SIN]	No	Yes	P3 Could Hv		Simon Segure	
4.00		**Call Routing Requirements**									+ Name	
4.01	Process	Repeat Caller	Agent	I want to be able to flag if this is a repeat caller and send to a specific agent or group of agents (e.g. if they called in [in the] last week or 48h, cancelled [repeat calls each within 7 days, assist and 48h, cancelled [repeat calls each within 7 days,	So that if a caller calls in multiple times for a similar inquiry, there is a chance that they will be routed to the same agent or a select caller, to form more bond, to agent/supervisor agent	Given I am a customer When I have called or at times in 7 days Then I should be routed to a specific queue as opposed to one [to the] agents	Yes	Yes	P1 Must Have		Simon Segure	
4.02	Process	Route to Skill	NFM/RM	I want to process the queue routing reference to *New accessible data	So that we can route a call to the right agents based on their skillset	Given I am a resource manager When I assess how different [Level] of complexity Then I should be routed to a specific group of agents who can handle [level] of call/queue with varying complexity [level]	Yes	Yes	P1 Must Have		Simon Segure	
4.03	Process	Multi-skilling	NFM/RM	I want to be able to multi-skill agents on multiple areas	So that we can cross-skilled agents who can assist, with different types of calls when multi-skilled [leveraged/normally, for example, multi-[having] [languages to Core and nice-to-have],	Given I am a resource manager When our team members are multi-skilled and our queues require more [to] support based on business need Then I should be able to cross multi-agents to multi-areas of business	Yes	Yes	P1 Must Have		Simon Segure	
4.04	Process	Skill Priority Routing	NFM/RM	I want to set priority routing based on [if] process operational needs	So that we prioritize the need for assisting in specific queues as needed	Given I am a resource manager When our team members are multi-skilled and our queues require more [to] support based on business need Then I should be able to cross multi-agents to multi-areas of business	Yes	Yes	P1 Must Have		Simon Segure	
4.05	Process	Skill Proficiency Routing	NFM/RM	I want to set priority on agent proficiency based off of business KPIs	So that if caller is waiting for X timeless, route it to a [new priority agent	Given I am a resource manager When our team members are multi-skilled and our queues require more [to] support based on business need Then I should be able to cross multi-agents to multi-areas of business	Yes	Yes	P1 Must Have		Simon Segure	
4.06	Business	Hours of Ops	NFM/RM	I want to be able to set up hours of operations based off business requirements with the flexibility to modify them as needed	So that customers can call during those scheduled hours	Given I am an Operations Manager or Resource Manager When I need to change business hours Then I should be able to configure that in the system	Yes	Yes	P1 Must Have		Simon Segure	
4.07	Business	Policy - low queue monitoring	NFM/RM	I want to now [be] monitors Many Calls Waiting, ASA, Longest Wait, Agents Logged In, Abandoned, Max Answer Sl, Calls offered, ATT of queues SLAs	So that I can monitor and manage our queues [in	Given I am a Resource Manager When the customer calls / talks under the [skill name] criteria Then I will sort the queue [Name=Sports_Queue] to [Premium Support]	Yes	Yes	P1 Must Have		Simon Segure	
4.08	Business	KS + KA Agent state monitoring	NFM/RM	I want to view schedule, actual state, adherence, call length, outbound calls, aux states	So that workforce analysts can monitor our agents [as	Given I am a Resource Manager When I need to monitor the queue Then I should be able to [by] issues within the queue, agent behaviour, etc	Yes	Yes	P1 Must Have		Simon Segure	[LC]: [D] + RTA: not available, but GenC will have equivalent
4.09	Technical	Configuration management tool	NFM/RM	I want to Remove/ add/ distribute adjust staffs only for agents	So that we can manage / manage speed of answer	Given I am a Resource Manager When I need to change staffing and priority based on business need Then I should be able to change staffing in the system	Yes	Yes	P1 Must Have		Simon Segure	
4.10	Process	Announced wait times broadcasted live	NFM/RM	I want to be set announcement for customers to hear estimated wait times. Recommend a 95th option	So that I protected visibility to customer how their wait times can be impacted	Given the [IVR] is ready for queue routing When a customer is identified through the IVR Then I should be able to send an estimated wait time [flag to the front end of the queue	Yes	Yes	P1 Must Have		Simon Segure	
4.11	Technical	Active predictive routing	System	I want to use customer information, conversation history and historical to route to [type]	So that I protected visibility to customer how their wait times can be impacted. Allow a customer to move to the [IVR] for	Given the [IVR] is ready for queue routing When a customer is identified through the IVR Then I will use Active Predictive Routing from GenC to intelligently distribute to calls in the right group of agents	No	Yes	P1 Must Have		Simon Segure	[LC]: At least 60 days before turning on
4.12	Technical	Auto-ACW when call/re-connect	Agent	I want to automatically between no to done manually on an agent to an Interval Wrap (ACW) also when a interaction ends	So that an agent has time to enter notes and complete post call tasks before moving on to the next interaction	Given an agent When they are [to automatically set in an 'after call work' state, ** This state should not be manually selected by an Agent.	Yes	Yes	P1 Must Have		Simon Segure	
4.13	Technical	Cross-platform Routing from Legacy platform,	System	I want to be able to warm-handover call, all upward technology ecosystems (Avaya, GenC, CX&S Planning, Legacy Routing)	So that I can target agents migrated on GenC even from legacy platforms,	Given the [IVR] is ready for queue routing When a customer is identified through the IVR Then I will be able to route through open [current in planned] cluster [back]	No	Yes	P1 Must Have		Simon Segure	
4.14	Technical	SSC mode checks for routing	System	I want to be able to confirm if the customer has the premium support and determine to ensure that the calls routed to the premium team	So that the call can be routed to the appropriate team to support,	Given a Resource Manager customer calls When the call is routed to the software them based on the premium decoder Then it will be routed to the [SSC] team,	Yes	Yes	P1 Must Have		Simon Segure	
4.15	Technical	DNIS_flag	System	I want to be able to route the customer [locations in our ecosystem (Concierge, post/Concierge Broadcast, Manitba, Genesys Planing, preQueue broadcast, etc)	So that I can properly route the account and intended [changing routing treatment] should, [Choose to	Given that a customer is identified When the customer calls / talks under the DNIS criteria Then I will sort the queue [Name=Sports_Q...]	Yes	Yes	P1 Must Have		Simon Segure	
4.16	Technical	DNIS Planning	System	I want to be able to see the parameter specific [Position=Sports_Q] [result of different locations in our ecosystem (Concierge, post/Concierge Broadcast, Manitba, Genesys Planing, preQueue broadcast, etc)	So that I can properly route the account and intended [changing routing treatment] should, [Choose to	Given that a customer is identified When the customer calls / talks under the DNIS criteria Then I will sort the queue [Name=Sports_Q...] to [Premium Support]	Yes	Yes	P1 Must Have		Simon Segure	
4.17	Technical	special treatment type - callback handly	System	I want to be able to see the parameter specific [Position=Sports_Q] [result of different locations in our ecosystem (Concierge, post/Concierge Broadcast, Manitba, Genesys Planing, preQueue broadcast, etc) Example: **CCR Bypass customers** [enough to with IVR, check], no interest, poor SoC scores, CCTT, new] should skip the main set of queues, [be] given to skilled calls [Assure or Care for short queue routing],	So that I can properly route the account and intended [changing routing treatment] should, [Choose to reduce friction for callers] [e.g., [Customers who have had a poor IVR experience may be more likely to] minimizing frustration and potential [negative	Given that a customer is identified When the customer calls / talks under the [skill name] criteria Then I will sort the special [Position=Sports_Q] [Priority] in the [queue] **CCR Bypass Numbers for routing:** (Assure Business Number) (Assure Care Professionals)	Yes	Yes	P1 Must Have		Simon Segure	
4.18	Technical	PBX Integration for call tagging	System	I want to flag identified call interactions for SCA levels [Packed Within 10, Routed Between 10 and 30 Routed above 30, Abandoned Within 10, Abandoned Between 10 and 30, Abandoned Above 30] [Assure Business Number] [Assure Care Professionals] [Assure Care Professionals] [Assure Care Professionals

Business Requirements for WLS Assure Business

Simon Begale & Team

Examine the standard CSAS business requirements in this Google spreadsheet,
Task: Mark columns F and G accordingly if relevant to WLS Assure PVG, add additional requirements unique to WLS Assure,

Also to confirm : Call recording & summarization sentiment analysis. See Alex's note. Additionally, Alex shared there could be an impact with additional fields added to the report coming from the current Genesys, however he believes there is no reason to stop. Ian Godfrey shared Insight will continue to work. Link : WLN/WLS Dashboard	File

Metric	Definition
Abandon	The number of times an end user abandoned an interaction in a queue. For example, the customer hangs up before an agent answers, or the system disconnects the interaction.
Abandon %	The percentage of offered interactions in which the customer disconnected before connecting with an agent. The abandon rate can identify queues that require extra staff to handle interactions in a timely manner. Calculated by: (Abandoned Count / Offered Count) * 100
ACD Exit	The number of times an entry exited a flow to an ACD queue. Includes the percentage of ACD exits compared with the total number of exits.
ACD Voicemail Exit	The number of times an entry exited a flow to an ACD voicemail. Includes the percentage of ACD voicemail exits compared with the total number of exits.
Active agents	The number of active agents. In some views, this number is shown next to the total number of queue members.
Active Total Callback	Active total callback duration is the sum of all calling activity for the call portions of the callback. For example, the active total callback duration could include all durations from the call portion of a callback: (Contacting --> (Dialing --> (Talk --> (Hold) --> (Talk --> (Acw .
Adherence Duration	The amount of time represented in days, hours, minutes, and seconds, of the adherence exception.
Adherence Status	The current adherence status of the user, including In Adherence, Out of Adherence, Unscheduled, Ignored, or Unknown.
After-call work (ACW)	The number of times after-call work (ACW) was completed. After-call work is the work that an agent performs immediately following an interaction. Work may include having activity codes, updating customer databases, filling out forms, or initiating outbound contact. As a metric, it indicates the total time an agent takes to finish working on a call. If an agent must complete work before the agent can handle the next contact, then ACW is factored into the average handle time.
Alert	The number of times agents receive an alert for interactions.
Alert - No Answer	The number of times an agent was alerted to a conversation but did not answer the conversation. Note: This metric does not specifically count the number of times an agent was placed in a Not Responding routing status. An agent is transitioned to Not Responding routing status after a specific alert time threshold for ACD-routed conversations. Alert - No Answer can be incremented for all conversation types for any situation where an alert was not followed by an answer event.
Answer %	The percentage of offered interactions that an agent answered. Calculated by: (Answered / Offered) * 100
Answered	A measurement of the number of assigned ACD interactions answered by an agent in a given period. Answered increments when the agent is the first to connect to the interaction.
Available	The time spent in the Available status for the specified period.
Average abandon	The average amount of time before a customer disconnects in an ACD queue before connecting with an agent. For example, the customer hangs up before an agent answers, or the system disconnects the interaction.
Average after-call work (Avg ACW)	The average amount of time agents spent completing after-call work. Calculated by: Total ACW / Interactions with ACW
Average contacting	The average amount of time an outbound interaction takes to connecting to the agent's phone. Usually, this duration is short. However, if the agent uses a remote phone the duration may be longer. Calculated by: (total contacting time/ total number of contacting segments)
Average dialing	The average amount of time an agent spends dialing and waiting for a contact to answer during outbound interactions. Calculated by: (total dialing time/ total number of dialing segments)
Average handle time (AHT)	The average amount of time agents spent handling interactions. This calculation includes talk time, hold time, and after-call work. For outbound calls it also includes dialing and contacting time. Calculated by: (cumulative talk time + cumulative hold time + cumulative after-call work + cumulative dialing time + cumulative contacting time) / Number of interactions handled
Average hold	The average number of seconds that interactions were placed on hold. Calculated by: Total Hold Time / Count of interactions with holds
Average speed of answer (ASA)	The average amount of time an interaction waits in queue before an agent answers it. This metric does not include interactions that agents do not answer. ASA is directly associated with the service level and provides insight into the customer service your company provides. ASA is recorded in the interval in which the agent answered the interaction. Calculated by: Total Answered (Answered Sum) / Answered Count (Answered Count)
Average wait	The average amount of time an interaction is in a queue before an agent answers it, before the interaction moves out of the queue, or before the customer abandons the interaction. Calculated by: Total Wait Time / Interactions
Avg Disconnect	The average amount of time until an entry disconnected in a flow.
Avg Exit	The average amount of time that an entry spent in a flow before exiting.
Avg Flow	The average amount of time that an entry spent in the flow.
Avg Outcomes (Flow Outcomes)	The average number of flow outcomes per entries into the flow. Calculated by: number of flow outcomes / number of entries
Avg talk	The average number of seconds spent interacting on a media type. Calculated by: Total Talk time / Count of interactions with Talk time
Away	The time spent in the Away status for the specified period.
Blind Transfer	The number of interactions an agent answered in one queue and then blind transferred. A blind transfer counts for the queue in which an agent answers the interaction.
Blind Transfer %	The percentage of interactions an agent answered in one queue and then blind transferred.
Break	The time spent in the Break status for the specified period.
Busy	The time spent in the Busy status for the specified period.
Campaign Connect Rate	The total number of interactions detected as live voice interactions, divided by the total number of interactions initiated, expressed as a percentage. This rate is based on the previous 10-minute time interval.
Communicating	The agent is on a non-ACD call, and, in relation to agent utilization and call routing, Genesys Cloud treats the non-ACD call like an ACD call. For example, administrators could continue agent utilization so Genesys Cloud does not route new interactions to agents, while they are on an ACD or non-ACD call. This status only appears if administrators have selected "Count non-ACD calls in utilization capacity" within the agent utilization configuration.
Connection	The number of connected customer sessions. A customer session includes any activity where an external party has joined a conversation. For example, a single customer session indicates a customer calling the system to go through the IVR, waiting in the queue, and getting answered.
Consult	The number of interactions an agent answered and then consulted with another participant with or without fully transferring the interaction. A consult counts for the queue in which an agent answers the interaction, even if they consult with another queue.
Consult Transfer	The number of call interactions an agent answered in one queue and then consult transferred, meaning they connected with a person or queue before transferring the call. A consult transfer counts for the queue in which an agent answers the interaction. See Consult transfer a call.
Consult Transfer %	The percentage of interactions an agent answered in one queue and then consult transferred.
Contact Abandon Rate	The percentage of Completed Abandons divided by total contacts.
Contacts	The number of interactions initiated by a remote party and connected to an agent.
Contacts handled	The total number of ACD and non-ACD interactions that agents were involved in for the selected media type. Handle increments in the interval in which the interaction ends, after the agent completes any after call work and completes the interaction.
Customer Disconnect	The number of times customers disconnected in a flow, including the percentage of customer disconnects compared with the disconnect count.
Customer Short Disconnect	The number of times customers disconnected in a flow before a short disconnect time. Includes the percentage of customer short disconnects compared with the disconnect count. The default short disconnect time is less than 10 seconds, though administrators can set the short disconnect time to any threshold they want. For more information, see the Configure analytics settings section in Configure contact center analytics options.
Customers interacting	The number of customers in conversation or on chat with an agent.
Customers waiting	An instantaneous observation of the number of interactions waiting in the queue to be answered. Waiting is calculated by the sum total of the number of interactions waiting.
Dial Abandon Rate	The percentage of Completed Abandons divided by total dials.
Dialing	The length of time that the call spent dialing and ringing. For example, a call that rings for 15 seconds and then disconnects show Dialing as 15 seconds.
Dials	The number of interactions initiated by the campaign.
Disconnect	The number of entries that disconnected in the flow, including the percentage of entries that disconnected compared with the total number of entries.
Disconnect time	The time that the call disconnected.
Entries	The total number of times that calls enter the flow or flow version. A call can enter a flow multiple times.
Exit	The number of entries that exited the flow to another destination, such as an ACD queue, ACD voicemail, or user. Includes the percentage of exits compared with the total number of entries.
Failure (Flow Outcomes)	The number of flow outcomes that were failures. Includes the percentage of failure outcomes compared with the total number of outcomes.
Flow Disconnect	The number of times a flow disconnected entries, including the percentage of flow disconnects compared with the total number of disconnects.
Flow exit	The number of times an entry exited a flow to another flow. Includes the percentage of flow exits compared with the total number of exits.
Flow-Out	Flow-outs are interactions that enter and leave a queue without getting answered by an agent and without getting disconnected. Flow-outs are an indication of customer service level and queue productivity. High numbers of flow-outs can indicate staffing issues or ineffective agents when used with high handle times (fullstop matching metric). Flow-outs can indicate transfers to external callbacks, and any system-driven events such as in-queue flows that transfer to another queue or external party after a certain amount of time. Flow-outs can also occur if the caller opts to exit out of the queue and return to the IVR. Offered interactions are either flow-out, answered, or abandoned interactions.
Group Exit	The number of times an entry exited a flow to a group. Includes the percentage of group exits compared with the total number of exits.
Handle	The total number of ACD and non-ACD interactions that agents were involved in for the selected media type. Handle increments in the interval in which the interaction ends, after the agent completes any after call work and completes the interaction.
Held interactions	The number of interactions with holds.
Hold	The cumulative hold time for all interactions.
Idle	The amount of time an agent spends in the Idle routing status. This routing status represents agents who are On Queue and able to take interactions but are not currently working with interactions.
Idle (Away)	The time spent in the Away status. Genesys Cloud puts agents into the Idle status when they are logged on to the desktop application but the screen saver engages, the screen locks, or the system enters sleep mode because of the agent's inactivity. The amount of time it takes for Genesys Cloud to change the agent's status to Idle depends on the user's system settings. When an agent enters Idle status, Genesys Cloud displays the agent's status as Away (for example, on the agent's profile page).
Interacting	The time that the agent was handling interactions or the number of interactions handled by an agent.
IVR Segments	The number of times the interaction enters an IVR.
Logged in	The total amount of time a user is logged in for the specified period.
Max ACW	The maximum amount of time spent on after call work for the selected interval.
Max Alert	The maximum amount of time an agent was being alerted.
Max Alert - No Answer	The maximum amount of time an agent was being alerted without responding to an interaction.
Max Answer	The maximum amount of time an agent spent answering assigned ACD interactions for the selected interval.
Max Disconnect	The longest amount of time that an entry spent in the flow before disconnecting.
Max Exit	The longest amount of time that an entry spent in the flow before exiting.
Max Flow	The longest amount of time that an entry spent in the flow.
Max Handle	The maximum amount of time agents were involved in ACD and non-ACD interactions, including answered interactions, transfers, callbacks, and outbound calls.
Max Hold	The maximum amount of time spent on hold for the selected interval.

Max Talk	The maximum amount of time spent interacting for the selected interval.
Max Wait	The maximum amount of time spent waiting in queue for the selected interval.
Meal	The time spent in the Meal status for the specified period.
Meeting	The time spent in the Meeting status for the specified period.
Met SLA	Number of interactions that met the defined service level.
Min ACW	The minimum amount of time spent on after call work for the selected interval.
Min Alert	The minimum amount of time an agent was being alerted.
Min Alert - No Answer	The minimum amount of time an agent was being alerted without responding to an interaction.
Min Answer	The minimum amount of time an agent spent answering assigned ACD interactions for the selected interval.
Min Handle	The minimum amount of time agents were involved in ACD and non-ACD interactions, including answered interactions, transfers, callbacks, and outbound calls.
Min Hold	The minimum amount of time spent on hold for the selected interval.
Min Talk	The minimum amount of time spent interacting for the selected interval.
Not Responding	An agent was On Queue or Interacting and did not answer an offered interaction. The agent could still be handling and completing other previous interactions. While Not Responding, the agent does not receive new interactions.
Number Exit	The number of times an entry exited a flow to a number. Includes the percentage of number exits compared with the total number of exits.
Off Queue	Off Queue represents the number of agents that are off queue for a specific queue. These agents are in another status, such as Available, Busy, or Meeting. Agents in the Out of Office and Offline statuses are not included in this number.
Offered	The number of interactions routed into the queue for an agent to answer. Offered interactions are either answered, abandoned, or flow-out interactions.
Offered to assignment	A measurement of call attempts that reach the Assignment Service including abandoned calls.
On Queue	The On Queue metric represents the number of agents that are on queue for a specific queue.
On unassigned interactions	This metric represents the number of agents currently working on non-assigned interactions. This value may not indicate misappropriated work. Non-assigned interactions could include after call work calls.
Outbound Attempt	The number of attempts made to call the customer.
Outbound Media	The number of outbound media for an interaction.
Outbound	This metric represents the number of outbound interactions placed on behalf of queue.
Outcome (Flow Outcomes)	The number of flow outcomes.
Over SLA	The number of sessions that exceeded the service level target.
Remote	The name or number in communication with the named agent. A name appears only if the remote number matches a directory entry. Note: Genesys Cloud obtains the remote number from the telco carrier. If the telco carrier does not provide data in the header, the location of the remote number will appear as the remote number.
Scheduled Activity	The activity for which the user is currently scheduled, including On Queue Work, Break, Meal, Meeting, Off Queue Work, Time Off, Training, Unavailable, or Unscheduled.
Secure Flow Exit	The number of times an entry exited a flow to a secure flow. Includes the percentage of secure flow exits compared with the total number of exits.
Service level %	Service level target is a contact center performance statistic expressed as "X percent of conversations answered in Y seconds." For example, a goal of answering 80% of voice calls within 20 seconds provides a service level target of 80/20. You can set the service level target for each media type in a queue. Analytics uses this service level target to calculate whether you are within the service level % defined by your service level agreement (SLA). For more information about setting the service level target, see Create queues or Edit or delete queues. Note: In the performance views that are not queue-specific, the Service Level % is calculated by queue and displayed as a --, or the aggregated group view since SLA targets vary by queue. The affected views are ONS Performance Summary and Skills Performance views. To view individual queue service level %, click the + to expand the row. Percent of interactions that were short abandoned.
Short Abandon %	Number of interactions that were short abandoned.
Short Abandon Count	Displays the skills set by the routing services for the interaction.
Skills	An instantaneous observation/query equivalent to Joined to Queue X. Staffed agents are the set of people that are currently staffed on a queue.
Staffed agents	The number of flow outcomes that were success. Includes the percentage of success outcomes compared with the total number of outcomes.
Success (Flow Outcomes)	An instant observation/query equivalent to Role of Agent & Eligible to Join Queue X & Online & not joined to queue X. Supplemental agents are the set of people that can be staffed for a queue.
Supplemental agents	The number of times entries disconnected in a flow due to a system error. This column includes the percentage of system error disconnects compared with the total number of disconnects.
System Error Disconnect	The amount of time the agent has been in the current status.
Time in status	The duration of time until the conversation was abandoned.
Time to abandon	The length of time that elapsed from when a customer answered the call to when an agent answered the call, including call analysis. This column is empty if the call is in preview mode, transferred to the outbound flow, or gets disconnected or abandoned before an agent answers it.
Time to Agent	The length of time from when a customer answered the call to when the system transfers the call into an outbound flow. This column is empty if the call is in preview mode or if the call transferred to the queue.
Time to flow	The total amount of time interactions are in queue waiting for an agent to answer them before customers abandoned the interactions.
Total abandon	The total amount of time interactions are in the queue waiting for an agent to answer them before customers abandoned the interactions.
Total Abandon	The total time Genesys Cloud alerts agents before the agent accepts or declines an interaction.
Total Alert	The total number of seconds Genesys Cloud offered an agent an interaction before the agent declined the interaction or the interaction timed out.
Total Alert - No Answer	The total amount of time outbound interactions take to connect to the agent's phone. Usually, this duration is short. However, if the agent uses a remote phone the duration may be longer.
Total contacting	The total amount of time an outbound interaction spends dialing a contact.
Total dialing	The total amount of time an entry spent in a flow until it disconnected.
Total Disconnect	The total amount of time an entry spent in a flow until it exited the flow to another destination, such as an ACD queue, ACD voicemail, or user.
Total Exit	The total time entries spent in the flow.
Total Flow	The total amount of time agents spend on an interaction including time spent contacting, time spent dialing, talk time, hold time, and after call work.
Total handle	The total amount of time that interactions spent in IVRs.
Total IVR	The total amount of time spent interacting on all the conversations by the agent, within an interval. For example, in an interaction, where an agent accepts an interaction, talks to the customer for two minutes, places the customer on hold for one minute, and then talks to the customer again for two minutes, the Total Talk equals 4 minutes.
Total Talk	The total amount of time an interaction is in a queue before an agent answers it, it flows out, or the customer abandons it. Genesys Cloud calculates the wait time in milliseconds.
Total wait	The time spent in the Training status for the specified period.
Training	A measurement of the number of interactions an agent answered in one queue and then transferred. A transfer counts for the queue in which an agent answers the interaction. This measurement is calculated by the number of interactions blind transferred or consult transferred.
Transfer	The number of transfers compared to the total number of interactions answered. Calculated by: (# of transfers / Interactions Answered) * 100
Transfer %	Trunk load is a time-related metric that includes all components of a voice interaction, other than the after-call work which does not require a circuit. Trunk load = Ring + AttendantIVR + Assignment + Talk Time
Trunk load	The number of times an entry exited a flow to a user. Includes the percentage of user exits compared with the total number of exits.
User Exit	The number of times an entry exited a flow to a user's voicemail. Includes the percentage of user voicemail exits compared with the total number of exits.
User Voicemail Exit	The number of interactions that waited in the queue.
Waiting	A derived metric of the total count of unique interactions being worked by an agent within a time period. Calculated by: Unique Interactions Holding + Talking + ACW.
Working Interactions
