	WLS Information	***TELUS Digital Team Prime*** *(Angela Harris)*	
		HARDWARE EVALUATION	
	Select all that apply	***If multiple selections apply please specify each type by team**	
Hardware	☑	Windows Desktop or Laptop	
	☑	Chromebook	
	☑	Thin Client (any type) - Will need replaced when moving to CCaaS solution	
	☐	Other - please specify	
Headset	Note	**Only wired call centre approved headsets are supported** **Wireless equipment and any personal devices (eg ipods) are not supported nor approved by security for use**	
	☑	Jabra 2300 / 2400 / 1500	
	☑	Poly 510 / 520 (with DA75 / 85 adapter)	
	☐	Net Driven ND1800G5	
	☐	Other - please specify - Jabra - ENC010- Astra A10 -JABRA EVOLVE2 30 STEREO USB-C-Logitech- some are using no head set or personal headsets	
		ACCESS EVALUATION	
	Select all that apply	***If multiple selections apply please specify each type by team**	
Type of Access	☑	YubiKey (Black or White) - some are using , some have one but don't use it and others don't have one at all	
	☐	Security Key Other - please list type	
	☑	VPN (Cisco AnyConnect)	
		If yes, specify which VPN Gateway(s) are accessed:	
	☑	VDI (VMWare)	
	☐	TDS (TELUS Desktop Stream)	
	☐	In office directly connected to Internet	
	☐	***Only TIP TSB***-At home: Agents must meet the internet minimum speed of 15/15mbps (upload/download) once logged into VPN/VDI/TDS	
	☐		
	☐

SUMMARY		
Name of team		
Area of focus		
Current team size		
GEO Locations		
Summarize the teams daily job function		
EVALUATION FORM		
Type of Work	Select all that apply	
	☑	Inbound Voice Calls through an IVR, Call Prompter, or Toll Free Number
	☐	Inbound Voice Calls through a direct extenstion number, or individual phone number
	☑	Manual Outbound calls to contact customers or other teams within TELUS (i.e. dial a number to connect)
	☑	Outbound Campaigns and management - Preview, Progressive, or Predictive
	☑	Back Office / Workitems / Email routing (i.e. Salesforce, SNOW, KANA Email)
	☐	Voicemail either through a shared mailbox or direct dial in extension number
	☑	SMS (1-way, 2-way, through an app or link)
	☑	Chat (internal chats, customer chats)
	☑	Do you take Credit Card Payments, or process any credit checks
Phone	Select all that apply	Do you actively use:
	☑	iWS(Genesys) and Avaya
	☑	Avaya Only for tracking time
	☑	Avaya Only for placing manual outbound calls to customers or other team members
	☑	WWE(Genesys) and SIP Softphone
	☐	Other: currently mulitple phone systems are used
Support	Select all that apply	
	☑	Do you need reporting from the system. If yes, what type of reporting
	☑	Do you need call recording, or a transcript of each call
	☑	Do you need a desktop screen capture
	☑	Do you need the ability to live monitor team members during any type of work interaction
	☑	Will coaching from call recordings or screen capture be needed
	☑	Do you need the ability to track a team members time logged in for the shift
	☑	Is real time monitoring of live queues, workitem buckets, emails, etc needed
	☑	Is the ability to schedule or forecast through for your team needed
	☑	Do you already use a Workforce management tool? If yes, please indicate which one
TD Locations	Select all that apply	

	☑	Does this team use a SOW with TELUS today
	☑	Does this team use VDI to access their TELUS applicattions today
Please provide any additional insights for this team that are available		

	TELUS Digital Team Prime *(Angela Harris)*	***WLS Information***
Channel	Questions	Answers
Voicemail	Which Voicemail platform do you use today: Avaya, Cisco, Business Connect, etc	*N/A*
	Please describe how you access your Voicemail today	*N/A*
	Were you a part of a Voicemail migration to a new platform within the last calendar year	*N/A*
	What is the Cisco and/or Avaya extension and dial in numbers for each team member today	*N/A*
	Are your direct contact numbers published anywhere	*N/A*
	How do you share the direct numbers with clients	*N/A*
	How many VM's does the team receive each month	*N/A*
Workitem	What systems do you completed back office, off queue, or task oriented work today: SFDC, SNOW, KANA, etc Please list all that apply	SFDC
	Do you complete any of these tasks inside your phone system. Eg) defer tasks, mark done, etc	Deferals in IWD
	When completing workitems are you scheduled for them, or do you receive the work in between calls and chats from clients	Yes
	Do you receive a 'screenpop' in your phone system when a workitem arrives	Yes
	How many workitems does the team complete each month	Varies from 0 - approx 5-10 daily
Surveys	What type of surveys do you send to your customers today	FLP, SFDC
	Are these surveys by email, text message, other - please specify	Email, SMS
	Do your surveys tie into team member metrics and/or performance evaluations	Yes
	Who needs access to survey data	Leaders
	How often is the context of the survey updated	Rarely
	How many surveys a month do you send	
	How many surveys a month do you receive back	3500
Language	Please list all languages you support	English and French

Business Requirements for WLS Care
Simon Sayce & Team

Examine the standard CS&S business requirements in this Google spreadsheet.
Task: Mark columns F and G accordingly if relevant to the G Care PMO. Add additional requirements emojis to WLS Care.

gsxgsxc and then click play all to access CS&S Genesys Cloud environment
To reference doing: click on / Add /

## ▼	☑	Column 2	✎ Business Requirement	As a (Role)	✎ Goal (I want to...)	✎ Purpose (so that...)	Given	Exists Today?	Required?	☑ MoSCow	Scope	👤 Owner	✎ Notes	Column 1	Column 2	Column 3	Column 4	Column 5	Column 6	Column 7	Column 8	Column 9	Column 10	Column 11	Column 12	Column 13	Column 14	Column 15	Column 16	Column 17	Column 18	Column 19	Column 20	Column 21	Column 22	Column 23	Column 24	Column 25	Column 26	Column 27	Column 28	Column 29	Column 30	Column 31	Column 32	Column 33	Column 34
1.00			**BR Requirements**									1 Name																																	
1.01		Technical	Caller Identification	System	**I want to** capture the phone number the customer is calling from.	So that the agent can call the customer back if the call drops	**Given** a Customer calls in. **When** their phone number is Active **Then** the system passes this info over to team member	Yes	Yes	#1 =Must Have		Glenn Seguin																																			
1.02		Process	Account Information	System	**I want to** prompt the Customer to utilize account number they are calling about	So that the Customer is routed to the proper sub menu (Consumer, Business, Corporate, member) and the proper group of Agents.	**Given** a customer calls in. **When** they Speak (or effectively) **Then** the system will route to the right CS&S with no, what account they are calling in about.	Yes	Yes	#1 =Must Have		Glenn Seguin																																					
1.03		Technical	Customer PII Identification	Customer	**I want the** PII to ask the customer for PII and its information is successfully identified	So that the customer is validated and passed PII Codes to Genesys and properly monitor the PII keys authenticated successfully or not to the team member	**Given** a customer calls in. **When** they enter their information and authentication **Then** the customer is allowed to perform changes to their account	Yes	Yes	#2 =Should Have		Glenn Seguin																																					
1.04		Technical	Screenpop in 3D (Smart Desktop) future state Care	Agent	**I want to** be able to see the customer account, accessibility & considerations when the call comes through the IVR	So that it creates a easy for agents to reveal the customer and the account pops up automatically	**Given** a customer calls in **When** they enter their information **Then** the account is popped up on in smartphone	Yes	Yes	P1 =Must Have		Glenn Seguin																																					
1.05		Technical	Lost cases / ARS tickets	System	**I want the** past 4 days of new cases created (SFDC) and ARS tickets numbers presented to the agent	So that agents have all presented historical data when speaking with a customer.	**Given** a Customer calls in **When** they are admitted to enhancing pre-existing case/ticket **Then** the system pops the incident details automatically for the agent	No	Yes	#2 =Should Have		Glenn Seguin																																					
1.06		Process	Voicemail Messages, Text Live/Broadcast Message, and Queue Specific Messaging (Voicemail Messages, Queue group announcements, position type, etc.)	System Admin	**I want the** caller to broadcast message at different $ti duration (Daily/Weekly, and queue) & based on long customer has looked at their account (like others they've, and whether) they have	So that I can decide when and where to play the message to the Customer	**Given** a customer calls in **When** there is a pending pre-broadcast message at any **Then** they will hear the message	Yes	Yes	P1 =Must Have		Glenn Seguin	This is referring to multiple broadcast alerts for we have today, but seems to be with in the main flow																																						
1.07		Technical	IVR Menu & Sub-Menus	System	**I want the** ability to ask for customers to navigate our call centre menus as well as possible/ menus for specific inquiries	So that they are able to reach the right department for inquiries/agent group	**Given** a customer calls in **When** they arrive in our IVR **Then** they can navigate through our menu with ease	Yes	Yes	P1 =Must Have		Glenn Seguin																																					
1.08		Technical	Cross-Business Core telephone number to receive through GenCloud (+44(0)8442 [x])	System	**I want to** make sure all calls routed to Business Care will be routed to GenCloud	So that this service(s) from between GenCloud and (WO / WW)	**Given** a customer calls in **When** they are routed through our IVR **Then** they will be routed through our IVR and setup	Yes	Yes	P1 =Must Have		Glenn Seguin	Although this is a "must have" this can be handled in phase 2, and needs alignment with CS																																						
1.09		Technical	CLI/ID Integration in the to +=Connect to between CS Client and Genesys Cloud	System	**I want to** identify the client, reason of the call key words and routed to the right team	So that we identify the customer, reason for the call key words and routed to the right team	**Given** a customer calls in **When** they are admitted to enhancing and setup an issue **Then** they will be routed through our IVR and setup	Yes	Yes	P1 =Must Have		Glenn Seguin	(MH) Already handled in host and NOT GC&S																																						
1.10		Technical	Cross all entry points for Business Care Workflow are routed through GenCloud	System	**I want to** make sure all calls routed to Business care will be routed to GenCloud	So that there are no weak Hub between GenCloud and (WO / WW) Call Flow transfers out	**Given** a customer calls in **When** they are admitted to CS and setup an issue **Then** they will be routed through our IVR and setup	Yes	Yes	P1 =Must Have		Glenn Seguin	(MH) Already handled in host and NOT GC&S for B2Cx, Audits will																																						
1.11		Technical	Customer journey+ reasons and transfers	Agent	**I want to be able** to see how many times a call has been transferred (agent & call back) (sales, Tel &) & if on incoming and outgoing transfers) or reported (how many previous calls in the last 7 days)	So that we understand how many times the Customer has contacted us and we can ensure the call/visit issues are resolved (route to an experienced agent)	**Given** a Customer has called us **When** they have been transferred or are transferring to someone else **Then** they will see those details on each, review, follow up	No	Yes	P2 =Should Have		Glenn Seguin	Partitender event, I dont think this exist today, but defined,																																						
1.12		Technical	Ability to see agent's last transfer (name, T or R) on incoming and outgoing transfers	Agent	**I want the** ability for the agent to see who they are transferring to or from	So that we can assist and monitor behaviour	**Given** when a Customer has called us **When** they have been transferred or are transferring to someone else **Then** they will see those details on each, review, follow up	No	Yes	P2 =Should Have		Glenn Seguin																																						
1.13		Technical	Wireless Tablet	Agent	**I want to** Communicate internally through a ticket updates to team members (Accepts, WW callbacks, Internal transfers to other LOBs)	So that we have a quick method of storing information to be read, recorded easily to be stored by the Operations/WW/Internal tracked by our SRT	**Given** a Customer has called us **When** there is an outage **Then** we share those details with the agent	No	Yes	P3 Could Have		Glenn Seguin																																						
1.14		Technical	Language Identification	System	**I want to** identify the customer in other/check or caught based on their language	So that we are receiving the customer in their preferred language	**Given** when a customer calls in **When** they are authenticated **Then** the system identifies the customers the can help in their preferred language (thanks to english)	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
1.15		Technical	Connection ID and Queue name display	Agent	**I want to** have the ability to see both the connection ID added to the call and the queue name that the call/added on	So that we can do BAU investigations and also to understand the customer's journey	**Given** a customer calls in **When** they are authenticated **Then** agent is able to see what the connection ID and queue name is	Yes	Yes	P1 =Must Have		Glenn Seguin	base curved on current info _new_data																																						
1.16		Process	Virtual Assistant implementation (?)	Agent	**I want to** have a sure virtual assistant within the IVR	So that we can be convinced in the IVR and not required to be routed to an agent	**Given** a Customer calls in **When** they are authenticated **Then** they can have a conversation and get support from a bot	No	Yes	P3 =Could Have		Glenn Seguin	Discussion may need to know if VA is built on Genesys, EPCM or another Agentbot																																						
2.00			**Queue Requirements**									1 Name																																	
2.01		Business	CS&S Wrap up codes: Updated Link	Agent	**I want to** have a list of common wrap up codes	So that when the outcome of the interaction is a common one, all agents have access to the shared wrap up codes	**Given** an agent is handling an interaction on the basis of for which the outcome is not specific to a single person (or group of agents) **When** the interaction needs to be diagnosed **Then** a common list of wrap up codes needs to be made available	Yes	Yes	P2 =Should Have		Glenn Seguin	(LC): Correct + Specific. Do for all LOBs																																						
2.02		Technical	Bot Key Cases requirements	System	**I want to** receive real-live interaction from source systems (SFDC, WS CS)	So that [can intelligently route to the proper agent group	**Given** a customer has called us **When** they have provided information to GenC **Then** we identify and distribute intelligently to the right group of agents	Yes	Yes	P1 =Must Have		Glenn Seguin	Less queues, more skillsets per queue																																						
2.03		Business	Queue Activity Live Monitoring	WFM / RM	**I want to** monitor agents/ various tables in real-time and be alerted when specific instances of non-compliance are observed.	So that we can manage service levels, coach and performance manage agents	**Given** an agent is logged in into Genc **When** the agent makes a mistake as that has a call **Then** the agent will be coached what the agent is	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
2.04		Technical	Queue high Wait/Longest queue priority not one for one as we will be ignoring all queues up	System	**I want to** have queues (consolidated), but attention the skillset	So that I can route to different skillset while having the amount of queues	**Given** a customer has called us **When** they have been assigned to the queue routing **Then** the call lands on a specific queues	Yes	Yes	P1 =Must Have		Glenn Seguin	Less queues, more skillsets per queue																																						
2.05		Business	Stored Daily Replace Survey	Supervisor	**I want to** have managers type over option of conducting agent surveys (Ex: Supervisor has a number list of the files. Manager can change in an Excel sheet and have)	So that I can evaluate agent calls and interviews for where the agent is performing in the customer experience. Identifies coaching opportunities	**Given** an STL/LIS supervisor/Manager **When** they are looking to monitor interactions with a customer **Then** they will be able to monitor the interaction live and intervene into the call if required	No	Yes	P2 =Should Have		Glenn Seguin																																						
2.06		Business	Screen Recording	Supervisor	**I want to** capture agent's screen live and what they are doing while on the call (inbound and outbound)	So that we can identify areas for coaching, performance management discipline and needed to evaluate calls	**Given** an STL/LIS supervisor/Manager or a resource manager **When** I am reviewing agent when/and/or and/or making changes **Then** I should be able to do different [angle of changes based on my calls type	Yes	Yes	P1 =Must Have		Glenn Seguin	Onshore: Users need to be for have this feature enabled. Offshore: Should be enabled (if not, reboot required)																																						
2.07		Business	Genesys Cloud Icon Profile +Supervisor, Agent and Admin and the +Wink Agent profile	WFM / RM	**I want to** have different levels of access based on role type	So that we can perform agent coding and schedule changes, using reports to coaching, ask time, basic training and view-ass states	**Given** an STL/LIS supervisor/Manager **When** I am reviewing agent when/and/or and/or making changes **Then** I should be able to do different [angle of changes based on my calls type	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
2.08		Business	Voice Recording (Audio)	Supervisor	**I want to** have 100% call recording (inbound and outbound)	So that we can listen in all inbound and outbound calls from agents (Applying transfers, conferences, consults etc)	**Given** an STL/LIS supervisor/Manager **When** I am reviewing agent when/and/or and/or making changes **Then** I should be able to call and review any calls they have	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
2.09		Technical	Resource call stats at end of the call (Wrap-up) sent to WFM to agent. Multi Data in BI, ADW	Supervisor	**I want to** enable team members to see their call stats in real time.	So that team members can self coach for improvement for those who are over targets	**Given** a STL/LIS team member **When** workforce is a call **Then** the system will send (AHT, FCR, ACW) our calls time is distributed for that call and the average for all call times in this same month.	No	Yes	P3 =Could Have		Glenn Seguin																																						
3.00			**Customer Identification Requirements**									1 Name																																	
3.01		Technical	Dial-IN summarize transcript and store into SESPOC +More state CMS	Agent	**I want to** make it easy to summarize the conversation that occurred during the call with the Customer	So that we can see it for our role in Shareddesktop or CASA	**Given** I am an agent **When** I am supporting a customer and need to have a note to the record that summarizes the core or **Then** I should be able to get an AI summary of the call to see in that note	No	Yes	P2 =Should Have		Glenn Seguin	[MH] To be discussed																																						
3.02		Business	Whisper Prompt		**I want to** leverage the Genc Whisper Prompt to indicate when a customer interaction arrives	So that the agent knows context or notice of the call before the agent interacts with the customer, Use the beep for CH & Beep & Light/Monitor for PR.	**Given** I am an agent **When** a call is routed to an agent **Then** the team member is called to be beep for english call, see a call awaiter for French calls.	No	Yes	P2 =Should Have		Glenn Seguin																																						
3.03		Technical	Products identifications	System	**I want to** be able to identify skillfulness products that the customer is calling about	So that we have visibility and ability to handle calls to ensure team if required.	**Given** I am an agent **When** a call is routed to an agent **Then** the call will be routed to agents according to their PRO/ and/or team if required.	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
3.04		Technical	Identify fraud calls (high and possible)	System	**I want the** ability to identify possible fraud calls and reject/alert these to our agents and report on these. Figure these calls	So that we make it difficult for Fraudsters. to get through or they are flagged to agents if calls go through for target purposes. This will be the lessons on the various [x]	**Given** I am an agent **When** a call is routed to an agent **Then** the call will be recorded with voice via Genesys, this call may be a fraud call based on specific call behaviour by the actor, CTO?	No	Yes	P2 =Should Have		Glenn Seguin	(LC): Maybe, since we've identified / list																																						
4.00			**Call Routing Requirements**									1 Name																																	
4.01		Process	Repeat Caller	Agent	**I want to** be able to flag if this is a repeat caller and send to a unique agent / queue if agreed (first call in). Current flow is based on IVR, subsection level and calls made within 7 days.	So that if a caller calls in multiple times for a similar inquiry, there is an escalate to advise the agents that it is a repeat caller, to then route them to a specific [x] contingent.	**Given** a customer **When** they have called in 3+ times in 7 days **Then** they will be routed to a special trained queue supported by our target [x] agents	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.02		Process	Route to Skill	WFM / RM	**I want to** access the queue routing reference to Voice specialists view.	So that we can route a call to the right agents based on new caller.	**Given** a customer **When** [regulate here different levels of complexity] **Then** the system can route a call to the right agents based on their skillset	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.03		Process	Multi-skilling	WFM / RM	**I want to be** able to multi-skill agents on an Adult+ basis	So that we can cross-trained agents who can assist with different types of calls + feel multi-skilled. Example: Agent can handle Adult, Child, Overall Care agents to Care and vice versa)	**Given** I am a resource manager **When** our team members are not [skilled] and our queues require more or less support based on business need **Then** I should be able to cross-skill agents to multiple areas of business	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.04		Process	Skill Priority Routing	WFM / RM	**I want to** set priority rank/groups/off of greatest operations/needs	So that we prioritize the need for assisting in specific queues on created	**Given** I am a resource manager **When** our team members are not [skilled] and our queues require more or less support based on business need **Then** I should be able to cross-skill agents to multiple areas of business	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.05		Process	Skill Proficiency Routing	WFM / RM	**I want to** set priority on agent proficiency based off of business rules	So that if caller is waiting for X minutes, route it to a lower priority agent	**Given** I am a resource manager **When** our team members are not [skilled] and our queues require more or less support based on business need **Then** I should be able to cross-skill agents to multiple areas of business	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.06		Business	Hours of Ops	WFM / RM	**I want to** be able to set up hours of operations based off business requirements while flexibility to modify them as needed	So that customers can call during these scheduled hours	**Given** I am an Operations Manager or Resource Manager **When** I am setting up hours **Then** I should be able to configure that in the system	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.07		Business	Failure Line queue monitoring	WFM / RM	**I want to** see [real-time] Active Calls Waiting, ASA, Longest wait time, %Abandoned, Max Answer, IS, Calls offered, AHT of queues/ LOB	So that I can monitor and manage our queues [on	**Given** I am a Resource Manager **When** I want to monitor the queues **Then** I should be able to [x] issues within the queue, agent	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.08		Business	IS + ISA Agent state monitoring	WFM / RM	**I want to** see schedule vs actual state, Adherence, callbegin, outbound calls, aux codes	So that we're more analytics to monitor our agents [on	**Given** I am a Resource Manager **When** I want to report the queue **Then** I should be able to [x] issues within the queue, agent and reason	Yes	Yes	P1 =Must Have		Glenn Seguin	(LC): ICV + ITA not available, but GenC will have equivalent																																						
4.09		Technical	Configuration manager tool	WFM / RM	**I want to** remove/ add skill level adjustments for agents	So that we can manage/ manage speed of answer	**Given** I am a Resource Manager **When** I want to change staffing and priority based on business need **Then** I should be able to change staffing in the network	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.10		Process	Estimated wait times broadcasted live	WFM / RM	**I want to** set up announcement for customer to hear estimated wait times, recommend a 90th version	So that I provided visibility to customer how their wait times can be impacted	**Given** I am a Resource Manager **When** I want to set an estimated wait time flag to the front end of the queue **Then** I should be able to [x] queue routing	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.11		Technical	Active predictive routing	System	**I want to** use customer information, conversation history and interests in my routing logic	So that it provided visibility to customer how their wait times can be impacted, when a customer is more to the [SAP] for	**Given** I am a Customer calls in **When** they are Active Predictive Routing from GenC to **Then** I will use Active Predictive Routing to the [x] queue	No	Yes	P1 =Must Have		Glenn Seguin	(LC): at least 90 days before turning on																																						
4.12		Technical	Auto ACW when call's complete	Agent	**I want to** automatically closed not be done manually set an agent to in When call done, wrote data when an interactions ends	So that an agent has time to enter notes and complete post-call tasks before moving on to the next interaction.	**Given** an agent is in an interaction with customer **When** the call ends **Then** they should be automatically set in an "After call work" state.	Yes	Yes	P1 =Must Have		Glenn Seguin	(LC): Also will need to assist for agent manually toggle reporting ** This state should not be manually selected by an Agent.																																						
4.13		Technical	Cross platform Routing from legacy platforms	System	**I want to** be able to communicate with all queue tracked (eg: Genesys to Pharos, Six-O, CMS Routing, Legacy Routing)	So that I can target agents ingested on trend, even from legacy platforms.	**Given** the [IVR] is ready for queue routing **When** the customer finishes navigating through the [x] **Then** I will use the queue to route to the correct agent [customers account] before [date]	No	Yes	P1 =Must Have		Glenn Seguin	Bridge agent required then route. Sarah [where the IVR is currently] Process																																						
4.14		Technical	CNTL tag	System	**I want to be** able to use the parameter queueEnqueuedTagAndWait to [Routing Priority, Time overlapping Campaigns, conditional skill Broadcast, Manditat, Genesys Routing, preQueue broadcast, etc]	So that I can properly tag the account and manage [changing routing treatments and] I choose to	**Given** I am a customer is identified **When** the customer profile falls under the CNTL criteria **Then** I will set the queueEnqueuedTagAndWait = "..."	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.15		Technical	Skill Pitstream	System	**I want to be** able to use the parameter queueEnqueuedTagAndWait different business in our ecosystem (Concierge, postConcierge Broadcast, Manditat, Genesys Routing, preQueue broadcast, etc)	So that I can properly tag the account and manage [changing routing treatments and] I choose to	**Given** I am a customer is identified **When** the customer profile falls under the SMS Platinum criteria **Then** I will set the queueEnqueuedTagAndWait = "Premium Support 1"	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.16		Technical	queueEnqueuedTagAndWait	System	**I want to be** able to use the parameter queueEnqueuedTagAndWait different business in our ecosystem (Concierge, postConcierge Broadcast, Manditat, Genesys Routing, preQueue broadcast, etc) Example: **I want to** bypass customers through both IVR, chat, the internet, phone call, access, CCTO, but I would like the main bot and receive CVMT options to select a [x] Review or Done for direct queue routing.	So that I can properly tag the account and manage [changing routing treatments and] I choose to So that I can route customers to the correct agent depending on business and potential CCTO or exceptions.	**Given** that a customer is identified **When** the customer profile falls under the specific treatment [type] inserts **Then** I will set the queueEnqueuedTagAndWait = "Premium Support 1" **CCA Bypass Native for routing:** Core team = accounts Account = Premium Support	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.17		Technical	+Email Integration for call logging	System	**I want to** log attended call connections to SCV Skillsets called within 15, Abandoned Between 15 and 30, Abandoned after 30) with unique customer profile association (ownership/use) using the CTN and not the VHE	So that I can enable other systems (CTI) ability to consume this interaction history/Data	**Given** that a customer is identified **When** the customer profile falls under the [x] between 15 and 30, after 30) **Then** I will log the call back to into my interaction hub	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.18		Technical	+PH Segment	System	**I want to be** able to use the parameter PH_QueueUUI if different business in our ecosystem (Concierge, postConcierge Broadcast, Manditat, Genesys Routing, preQueue broadcast, etc) **Repeat Treatment:** If a customer is calling more than 3 times within the last 7 days, this bot will not offer abandoned calls once it be routed directly to the Care Support queue and only the main bot. Use the [x] to stress mention CTN's to tag and track every call in the PH segment.	So that I can properly tag the account and manage [changing routing treatments and] I choose To reduce agent call fatigue by reporting to only the specific group of agents who callers' prefer, while allow treatment to resolve customer issues, preventing issues and future CCTO or escalations.	**Given** that a customer is identified **When** the customer profile falls under the **Then** I will set the PH_QUEUEUUI = [x] Service) **Repeat treatment PH Segment tagging:** less_4_days less_4_days less_4_days	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
4.19		Technical	Queue Priority (Suggestion +.com)	System	**I want to** set up a priority bump for calls received in the IVR queue and for transfer calls.	So that transferred customers receive priority handling and reduce wait times for IVR customers.	**Given** a call is either routed to the IVR queue or is a transfer call **When** the call enters the queue **Then** the call will [x] receive an automatic priority bump	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
5.00			**Call back (Outbound) Requirements**									1 Name																																	
5.01		Technical	Abandoned caller Automatic Callback	System	**I want to** make a callback to customers that have recently abandoned within [configurable] seconds waiting in the queue	So that if the call disconnects (manually) prompt the agent to initiate a callback [Yes/NO] [Yes/NO]	**Given** an inbound call into the [IVR] is initiated by a client **When** the call gets abandoned/drops within a certain [x] **Then**	No	Yes	P3 =Could Have		Glenn Seguin	clarify as "abandon callback"																																						
5.02		Technical	Display name on Outbound Call Number Table as +44(0)8442 [x]	System	**I want the** outbound call display to show "TELUS Business" with Toll-free +44(0)8442 [x]	So that customers know it's TELUS care calling back and they assume so we can resolve their issue	**Given** an outbound call is placed by an Agent **When** they are navigating **Then** I should display a Display Name and a Phone Number	Yes	Yes	P1 =Must Have		Glenn Seguin	(LC): On Nuance																																						
5.03		Technical	Manual Dialpad on call	Agent	**I want to** be able to place a manual outbound call associated to an outbound queue	So that I can make follow-up calls, and display my division called ID information [Eff. Q2] Voice [ ] on us	**Given** I am an agent **When** I am on a call with the customer an update **Then** I should be able to call them back without knowing my personal information (refer to Eff. Q2)	Yes	Yes	P1 =Must Have		Glenn Seguin																																						
5.04		Technical	Scheduled Callback	System	**I want to** provide customers the ability to schedule a call-event/ time to callback	So that we can ensure first call resolution and customer experience	**Given** a client is calling in **When** they are waiting in the queue **Then** I should be given the option to offer a schedule [x] callback	Yes	Yes	P1 =Must Have		Glenn Seguin	(LC): Follow-+ Maybe (LC): Tweak for GCB (GCM)																																						
5.05		Technical	OPEC last follow-ups	System	**I want the** follow-up tasks to [x] in with the queue to follow up with customers who have called in the past [x] reporting in/see this follow-up call was not completed or no answer.	So that we honor the promise made to our customers.	**Given** I am an agent **When** a call drops (or I need to follow up with a customer on an outstanding issue) **Then** I should be able to call them back	Yes	Yes	P1 =Must Have		Glenn Seguin	(LC): Keith let's provide more																																						

6.38		**Communications (Click-To-Call, Phone) Customer Facing**										
6.01	Technical	Activate a (name) Chat Queue - Omnisource	System	**I want** to be able to communicate and have 2-way communication with internal & resource site	**So that** I can easily support for our team members through assistance chat widget	**Given** that a team member has a question for tier 2 **When** the team member initiate a chat through assistance widget **Then** I will connect the team member with an agent on the HO team organized on Genc	Yes	Yes	P1 - Must Have		Simon Seguin	[MVP] My app [use cases] (interviews)
6.02	Technical	Activate a (name) Chat Queue - [Link text]	System	**I want** to be able to communicate and have 2-way communication with (Agreement chat widget	**So that** I can easily customer support through [Link text] chat widget	**Given** that a customer is navigating our [Link text] and want to chat with us **When** the customer finish his conversation with the CSR chatbot, and the chatbot determines we need to connect to an agent **Then** I will connect the customer with an agent on the ROX RCA team organized on Genc	Yes	Yes	P1 - Must Have		Simon Seguin	
6.03	Technical	Activate a (name) Chat Queue - mytalus application	System	**I want** to be able to communicate and have 2-way communication with mytalus application chat	**So that** I can easily customer support through my Talus application	**Given** that a customer is navigating our my Talus application and want to chat with us **When** the customer finish his conversation with the CSR chatbot, and the chatbot determines we need to connect to an agent **Then** I will connect the customer with an agent on the ROX RCA team organized on Genc	Yes	Yes	P1 - Must Have		Simon Seguin	
6.04	Business	100% chat capture (One Source chat for Channel Care Agencies, we do not have a Channel Partner facing chat queue)	Supervisor	**I want** managers and quality to be able to review chat performance and quality	**So that** we can manage team performance	**Given** I am a TELUS supervisor/Manager **When** I am supporting an agent's interaction with a customer **Then** I would be able to review any chats they have taken	Yes	Yes	P2 - Should Have		Simon Seguin	
6.05	Business	Chat reporting	Supervisor	**I want** to be able to review real-time + history of the customer, Abandoned chats, Average handle time, Average speed of answer, Abandoned chats, repeat chats	**So that** we have visibility on team performance	**Given** I am an agent **When** I am receiving a call **Then** I would need to be able to see their current and historical performance	Yes	Yes	P2 - Should Have		Simon Seguin	
6.06	Business	Chat survey	Supervisor	**I want** VOC surveys to be sent after the chat is the agent that was assisted for Business Care Highest.	**So that** there is visibility on team performance and we obtain feedback from our internal stakeholders	**Given** I am an agent **When** I am receiving a call **Then** I would be able to get feedback on the call via a VOC survey	Yes	Yes	P2 - Should Have		Simon Seguin	
7.00		**Transfer Requirements**										
7.01	Business	Genc Lead migration, for all of our sites including Canada, Philippines, Mexico, Canada & Asia	Agent	**I want** to ensure that all of our sites are migrated to the new platform	**So that** we are all able to support business needs / redundancy	**Given** the migration to GenC is complete **When** WFM needs to leverage a team member from any of our sites **Then** the business should be able to leverage any of our team members to assist our (cross units) the organization	Yes	Yes	P1 - Must Have		Simon Seguin	
7.02	Business	Genc Lead migration for our voices **I want to be able to measure and view all aux states. (Agree that the list here:** https://telusinternational.sharepoint.com/:x:/r/sites/ProjectCXTelus/Shared%20Documents/CX%20Aux%20Codes.xlsx?d=w1ca1e1e1e1e1e1e1e1e1e1e1e1e1e1e&csf=1&web=1) **our Aux 4, 6, 8, 9 11 need to also be captured**	Supervisor	**So that** we have visibility into team performance	**Given** I am an analyst or supervisor **When** I am reporting on agents **Then** I would need to be able to see their current and historical performance	Yes	Yes	P1 - Must Have		Simon Seguin	
7.03	Technical	Customer information shared during transfer	Agent	**I want** the ability to provide visibility of customer and Channel matter information upon transfer	**So that** agents receiving the call can still review customer info without having to start from scratch	**Given** I am receiving a call **When** I am receiving a call (Genc Lead, Avaya, yet-to-be-built) in the system for the next agent **Then** I would like to see the customer's information	Yes	Yes	P2 - Should Have		Simon Seguin	
7.04	Process	**Speed Dials**: Transfer calls to other TELUS Business Units using speed dial	Agent	**I want** the new, shortened and shared speed dial, Event agents to be able to easily transfer calls to other teams	**So that** we can ensure we transfer the call to the right team	**Given** I need to transfer (or consult with a different group of agents **When** I select the the queue **Then** I should have access to all created queues regardless of the partner	Yes	Yes	P1 - Must Have		Simon Seguin	(L2, 1:1B have transfer widget, upcoming
7.05	Technical	Data object for improving QM			Used for adding [number codes] [time]		No	Yes	P2 - Should Have		Simon Seguin	
8.38		**Reporting Requirements**										
8.01	Business	Access to reporting on all key metrics for agents	Performance Analyst	**I want** to have the ability to pull reports on the items of Answer, Average Handle Time and AHT for each call / all of our CSR (AHT, ACW, Hold Time, Talk Time, Aux states)	So that operations has the ability to cross dashboard analytics to make accurate decisions, report and share in various forums	**Given** I am an analyst or supervisor **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance	Yes	Yes	P1 - Must Have		Simon Seguin	
8.02	Business	Non-wrap Codes	System	**I want** to have a process in (name) Cloud that supports our existing non-wrap codes (Hold, Transfer, Consult, Abandon) and that the (name) organic code in our "overflow" users and get assigned to agents. Agents are notified through [MS Boss so I can efficiently react to issues however the Aux section to maybe it.	So that we have a workflow integration Customer Relationship Management (CRM) system, where Non-wrapping Cases can be analyzed to identify trends, common issues, and areas for improvement in products, services, or processes.	**Given** I am an agent **When** I am supporting a shared queue with a non-live interactions **Then** I would be able to get real-time interactions assigned to a client to me	No	Yes	P1 Must Have		Simon Seguin	There is an (link) mapping that for work/work in Genesys Cloud however there is something called (name) Work Automation (WA) that can be leveraged for non-wrap codes. Therefore, this would need to be captured as part of the WA, and the Aux be tracked into the project. https://help.mypurecloud.com/articles/create-work-items/#:~:text=Work%20items%20are%20a%20way,and%20assign%20them%20to%20queues.
8.03	Business	No_Agent Detail	Supervisor	**I want** to see # of calls and how which queue Agent has taken as well as all aux states including AHT, Talk Time, ACW, Hold	So that we can audit agent staffing and how much assistance provided for cross skilled Agents	**Given** I am an analyst or supervisor **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance	Yes	Yes	P1 - Must Have		Simon Seguin	[MVP] We are able to DOO in CC
8.04	Business	Queue Duration	Performance Analyst	**I want** to see # of calls and how which queue for an MU/ MS set	So that we can to audit MU staffing and how much assistance provided for cross skilled MUs	**Given** I am an analyst or supervisor **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance	Yes	Yes	P1 - Must Have		Simon Seguin	[MVP] We are able to DOO in CC
8.05	Business	Agent Activity	WFM / RM	**I want** to see agents historical activity states	So that we can see how and how long agent was in a particular state for	**Given** I am a resource manager or capacity planner **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance so I can plan accordingly for vacants, absences, etc.	Yes	Yes	P1 - Must Have		Simon Seguin	[MVP] We are able to only QRY C, X numbers at last needed here, as I have reports built, per RTA's. They will need to know how long the information from DO.
8.06	Technical	Wrkstn Reporting	WFM / RM	**I want** to see intraday Calls vs [one for CT/ CT set, Compare forecast vs actual	So that we can see call volume based on forecasted interval and see call volume of actual vs forecast	**Given** I am a resource manager or capacity planner **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance so I can plan accordingly for capacity, absences, etc.	Yes	Yes	P1 - Must Have		Simon Seguin	[MVP] Reporting primes will need to update their scripts to pull this information from DC at time of migration
8.07	Technical	Queue History	WFM / RM	**I want** to see call volume and time stamps of calls coming in to specific queues	So that we can see call volume data of specific queues	**Given** I am a resource manager or capacity planner **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance so I can plan accordingly for capacity, absences, etc.	Yes	Yes	P1 - Must Have		Simon Seguin	
8.08	Technical	IEX Forecast	WFM / RM	**I want** to forecast FTE requirement on a daily basis	So that we can Determine FTE required per period for CC/ CT set	**Given** I am a resource manager or capacity planner **When** I am reporting on agent **Then** I would need to be able to see their current and historical performance so I can plan accordingly for capacity, absences, etc.	Yes	Yes	P2 - Should Have		Simon Seguin	
9.00		**Risk Care / Channel Care Indicators**										
						Given that a team member has a question for tier 2 **When** the team member initiate a chat through assistance widget **Then** I will connect the team member with an agent on the HO team organized on GenC					
A.01	Technical	Activate a (name) Chat Queue - Omnisource	System	**I want** to be able to communicate and have 2-way communication with internal resources site	So that I can easily support for our team members through assistance chat widget		Yes	Yes	P1 - Must Have		Simon Seguin	
A.02	Business	Chat queue reporting	Supervisor	AHT, # of chats, Aux states, ACW, Voice of the Customer survey	Report on and coach chat agents in Fullcast	**Given** I am a fullcast manager, when I am coaching my agents on performance, then I need access to all of their data and metrics	Yes	Yes	P2 - Should Have		Simon Seguin	
A.03	Business	100% Chat capture	Supervisor	**I want** to capture all chat transcripts	So that we can reference and review for quality	**Given** I am a fullcast manager, when I am coaching my agents on performance, then I need access their VOC performance for coaching	No	Yes	P2 - Should Have		Simon Seguin

Metric	Definition
Abandon	The number of times an end user abandoned an interaction in a queue. For example, the customer hangs up before an agent answers, or the system disconnects the interaction.
Abandon %	The percentage of offered interactions in which the customer disconnected before connecting with an agent. The abandon rate can identify queues that require extra staff to handle interactions in a timely manner. Calculated by: (Abandoned Count / Offered Count) * 100
ACD Exit	The number of times an entry exited a flow to an ACD queue. Includes the percentage of ACD exits compared with the total number of exits.
ACD Voicemail Exit	The number of times an entry exited a flow to an ACD voicemail. Includes the percentage of ACD voicemail exits compared with the total number of exits.
Active agents	The number of active agents. In some views, this number is shown next to the total number of queue members.
Active Total Callback	Active total callback duration is the sum of all calling activity for the call portions of the callback. For example, the active total callback duration could include all durations from the call portion of a callback: (Contacting --> (Dialing --> (Talk --> (Held) --> (Talk --> (Acw .
Adherence Duration	The amount of time represented in days, hours, minutes, and seconds, of the adherence exception.
Adherence Status	The current adherence status of the user, including In Adherence, Out of Adherence, Unscheduled, Ignored, or Unknown.
After-call work (ACW)	The number of times after-call work (ACW) was completed. After-call work is the work that an agent performs immediately following an interaction. Work may include having activity codes, updating customer databases, filling out forms, or initiating outbound contact. As a metric, it indicates the total time an agent takes to finish working on a call. If an agent must complete work before the agent can handle the next contact, then ACW is factored into the average handle time.
Alert	The number of times agents receive an alert for interactions.
Alert - No Answer	The number of times an agent was alerted for a conversation but did not answer the conversation. Note: This metric does not specifically count the number of times an agent was placed in a Not Responding routing status. An agent is transitioned to Not Responding routing status after a specific alert time threshold for ACD-routed conversations. Alert - No Answer can be incremented for all conversation types for any situation where an alert was not followed by an answer event.
Answer %	The percentage of offered interactions that an agent answered. Calculated by: (Answered / Offered) * 100
Answered	A measurement of the number of assigned ACD interactions answered by an agent in a given period. Answered increments when the agent is the first to connect to the interaction.
Available	The time spent in the Available status for the specified period.
Average abandon	The average amount of time before a customer disconnects in an ACD queue before connecting with an agent. For example, the customer hangs up before an agent answers, or the system disconnects the interaction.
Average after-call work (Avg ACW)	The average amount of time agents spent completing after-call work. Calculated by: Total ACW / Interactions with ACW
Average contacting	The average amount of time an outbound interaction takes to connecting to the agent's phone. Usually, this duration is short. However, if the agent uses a remote phone the duration may be longer. Calculated by: (total contacting time/ total number of contacting segments)
Average dialing	The average amount of time an agent spends dialing and waiting for a contact to answer during outbound interactions. Calculated by: (total dialing time/ total number of dialing segments)
Average handle time (AHT)	The average amount of time agents spent handling interactions. This calculation includes talk time, hold time, and after-call work. For outbound calls it also includes dialing and contacting time. Calculated by: (cumulative talk time + cumulative hold time + cumulative after-call work + cumulative dialing time + cumulative contacting time) / Number of interactions handled
Average hold	The average number of seconds that interactions were placed on hold. Calculated by: Total Hold Time / Count of interactions with holds
Average speed of answer (ASA)	The average amount of time an interaction waits in queue before an agent answers it. This metric does not include interactions that agents do not answer. ASA is directly associated with the service level and provides insight into the customer service your company provides. ASA is recorded in the interval in which the agent answered the interaction. Calculated by: Total Answered (Answered Sum) / Answered Count (Answered Count)
Average wait	The average amount of time an interaction is in a queue before an agent answers it, before the interaction moves out of the queue, or before the customer abandons the interaction. Calculated by: Total Wait Time / Interactions
Avg Disconnect	The average amount of time until an entry disconnected in a flow.
Avg Exit	The average amount of time that an entry spent in a flow before exiting.
Avg Flow	The average amount of time that an entry spent in the flow.
Avg Outcomes (Flow Outcomes)	The average number of flow outcomes per entries into the flow. Calculated by: number of flow outcomes / number of entries
Avg talk	The average number of seconds spent interacting on a media type. Calculated by: Total Talk time / Count of interactions with Talk time
Away	The time spent in the Away status for the specified period.
Blind Transfer	The number of interactions an agent answered in one queue and then blind transferred. A blind transfer counts for the queue in which an agent answers the interaction.
Blind Transfer %	The percentage of interactions an agent answered in one queue and then blind transferred.
Break	The time spent in the Break status for the specified period.
Busy	The time spent in the Busy status for the specified period.
Campaign Connect Rate	The total number of interactions detected as live voice interactions, divided by the total number of interactions initiated, expressed as a percentage. This rate is based on the previous 10-minute time interval.
Communicating	The agent is on a non-ACD call, and, in relation to agent utilization and call routing, Genesys Cloud treats the non-ACD call like an ACD call. For example, administrators could continue agent utilization so Genesys Cloud does not route new interactions to agents while they are on an ACD or non-ACD call. This status only appears if administrators have selected "Count non-ACD calls in utilization capacity" within the agent utilization configuration.
Connection	The number of connected customer sessions. A customer session includes any activity where an external party has joined a conversation. For example, a single customer session indicates a customer calling the system to go through the IVR, waiting in the queue, and getting answered.
Consult	The number of interactions an agent answered and then consulted with another participant with or without fully transferring the interaction. A consult counts for the queue in which an agent answers the interaction, even if they consult with another queue.
Consult Transfer	The number of call interactions an agent answered in one queue and then consult transferred, meaning they connected with a person or queue before transferring the call. A consult transfer counts for the queue in which an agent answers the interaction. See Consult transfer a call.
Consult Transfer %	The percentage of interactions an agent answered in one queue and then consult transferred.
Contact Abandon Rate	The percentage of Completes Abandons divided by total contacts.
Contacts	The number of interactions initiated by a remote party and connected to an agent.
Contacts handled	The total number of ACD and non-ACD interactions that agents were involved in for the selected media type. Handle increments in the interval in which the interaction ends, after the agent completes any after call work and completes the interaction.
Customer Disconnect	The number of times customers disconnected in a flow, including the percentage of customer disconnects compared with the disconnect count.
Customer Short Disconnect	The number of times customers disconnected in a flow before a short disconnect time, including the percentage of customer short disconnects compared with the disconnect count. The default short disconnect time is less than 10 seconds, though administrators can set the short disconnect time to any threshold they want. For more information, see the Configure analytics settings section in Configure contact center analytics options.
Customers interacting	The number of customers in conversation or on chat with an agent.
Customers waiting	An instantaneous observation of the number of interactions waiting in the queue to be answered. Waiting is calculated by the sum total of the number of interactions waiting.
Dial Abandon Rate	The percentage of Completes Abandons divided by total dials.
Dialing	The length of time that the call spent dialing and ringing. For example, a call that rings for 15 seconds and then disconnects show Dialing as 15 seconds.
Dials	The number of interactions initiated by the campaign.
Disconnect	The number of entries that disconnected in the flow, including the percentage of entries that disconnected compared with the total number of entries.
Disconnect time	The time that the call disconnected.
Entries	The total number of times that calls enter the flow or flow version. A call can enter a flow multiple times.
Exit	The number of entries that exited the flow to another destination, such as an ACD queue, ACD voicemail, or user. Includes the percentage of exits compared with the total number of entries.
Failure (Flow Outcomes)	The number of flow outcomes that were failures. Includes the percentage of failure outcomes compared with the total number of outcomes.
Flow Disconnect	The number of times a flow disconnected entries, including the percentage of flow disconnects compared with the total number of disconnects.
Flow exit	The number of times an entry exited a flow to another flow. Includes the percentage of flow exits compared with the total number of exits.
Flow-Out	Flow-outs are interactions that enter and leave a queue without getting answered by an agent and without getting disconnected. Flow-outs are an indication of customer service level and queue productivity. High numbers of flow-outs can indicate staffing issues or ineffective agents when used with high handle times (bullseye matching metric). Flow-outs can indicate transfers to external callbacks, and any system-driven events such as in-queue flows that transfer to another queue or external party after a certain amount of time. Flow-outs can also occur if the caller opts to exit out of the queue and return to the IVR. Offered interactions are either flow-out, answered, or abandoned interactions.
Group Exit	The number of times an entry exited a flow to a group. Includes the percentage of group exits compared with the total number of exits.
Handle	The total number of ACD and non-ACD interactions that agents were involved in for the selected media type. Handle increments in the interval in which the interaction ends, after the agent completes any after call work and completes the interaction.
Held interactions	The number of interactions with holds.
Held	The cumulative hold time for all interactions.
Idle	The amount of time an agent spends in the Idle routing status. This routing status represents agents who are On Queue and able to take interactions but are not currently working with interactions.
Idle (Away)	The time spent in the Away status. Genesys Cloud puts agents into the Idle status when they are logged on to the desktop application but the screen saver engages, the screen locks, or the system enters sleep mode because of the agent's inactivity. The amount of time it takes for Genesys Cloud to change the agent's status to Idle depends on the user's system settings. When an agent enters Idle status, Genesys Cloud displays the agent's status as Away (for example, on the agent's profile page).
Interacting	The time that the agent was handling interactions or the number of interactions handled by an agent.
IVR Segments	The number of times the interaction enters an IVR.
Logged in	The total amount of time a user is logged in for the specified period.
Max ACW	The maximum amount of time spent on after call work for the selected interval.
Max Alert	The maximum amount of time an agent was being alerted.
Max Alert - No Answer	The maximum amount of time an agent was being alerted without responding to an interaction.
Max Answer	The maximum amount of time an agent spent answering assigned ACD interactions for the selected interval.
Max Disconnect	The longest amount of time that an entry spent in the flow before disconnecting.
Max Exit	The longest amount of time that an entry spent in the flow before exiting.
Max Flow	The longest amount of time that an entry spent in the flow.
Max Handle	The maximum amount of time agents were involved in ACD and non-ACD interactions, including answered interactions, transfers, callbacks, and outbound calls.
Max Held	The maximum amount of time spent on hold for the selected interval.

Max Talk	The maximum amount of time spent interacting for the selected interval.
Max Wait	The maximum amount of time spent waiting in queue for the selected interval.
Meal	The time spent in the Meal status for the specified period.
Meeting	The time spent in the Meeting status for the specified period.
Met SLA	Number of interactions that met the defined service level.
Min ACW	The minimum amount of time spent on after call work for the selected interval.
Min Alert	The minimum amount of time an agent was being alerted.
Min Alert - No Answer	The minimum amount of time an agent was being alerted without responding to an interaction.
Min Answer	The minimum amount of time an agent spent answering assigned ACD interactions for the selected interval.
Min Handle	The minimum amount of time agents were involved in ACD and non-ACD interactions, including answered interactions, transfers, callbacks, and outbound calls.
Min Hold	The minimum amount of time spent on hold for the selected interval.
Min Talk	The minimum amount of time spent interacting for the selected interval.
Not Responding	An agent was On Queue or Interacting and did not answer an offered interaction. The agent could still be handling and completing other previous interactions. While Not Responding, the agent does not receive new interactions.
Number Exit	The number of times an entry exited a flow to a number. Includes the percentage of number exits compared with the total number of exits.
Off Queue	Off Queue represents the number of agents that are off queue for a specific queue. These agents are in another status, such as Available, Busy, or Meeting. Agents in the Out of Office and Offline statuses are not included in this number.
Offered	The number of interactions routed into the queue for an agent to answer. Offered interactions are either answered, abandoned, or flow-out interactions.
Offered to assignment	A measurement of call attempts that reach the Assignment Service including abandoned calls.
On Queue	The On Queue metric represents the number of agents that are on queue for a specific queue.
On unassigned interactions	This metric represents the number of agents currently working on non-assigned interactions. This value may not indicate misappropriated work. Non-assigned interactions could include after call work calls.
Outbound Attempt	The number of attempts made to call the customer.
Outbound Media	The number of outbound media for an interaction.
Outbound	This metric represents the number of outbound interactions placed on behalf of queue.
Outcome (Flow Outcomes)	The number of flow outcomes.
Over SLA	The number of sessions that exceeded the service level target.
Remote	The name or number in communication with the named agent. A name appears only if the remote number matches a directory entry. Note: Genesys Cloud obtains the remote number from the telco carrier. If the telco carrier does not provide data in the header, the location of the remote number will appear as the remote number.
Scheduled Activity	The activity for which the user is currently scheduled, including On Queue Work, Break, Meal, Meeting, Off Queue Work, Time Off, Training, Unavailable, or Unscheduled.
Secure Flow Exit	The number of times an entry exited a flow to a secure flow. Includes the percentage of secure flow exits compared with the total number of exits.
Service level %	Service level target is a contact center performance statistic expressed as "X percent of conversations answered in Y seconds." For example, a goal of answering 80% of voice calls within 20 seconds provides a service level target of 80/20. You can set the service level target for each media type in a queue. Analytics uses this service level target to calculate whether you are within the service level % defined by your service level agreement (SLA). For more information about setting the service level target, see Create queues or Edit or delete queues. Note: In the performance views that are not queue-specific, the Service Level % is calculated by queue and displayed as a -- on the aggregated group row since SLA targets vary by queue. The affected views are ONS Performance Summary and Skills Performance views. To view individual queue service level %, click the + to expand the row. Percent of interactions that were short abandoned.
Short Abandon %	Number of interactions that were short abandoned.
Short Abandon Count	Displays the skills set by the routing services for the interaction.
Skills	An instantaneous observation/query equivalent to Joined to Queue X. Staffed agents are the set of people that are currently staffed on a queue.
Staffed agents	The number of flow outcomes that were success. Includes the percentage of success outcomes compared with the total number of outcomes.
Success (Flow Outcomes)	An instant observation/query equivalent to Role of Agent & Eligible to Join Queue X & Online & not joined to queue X. Supplemental agents are the set of people that can be staffed for a queue.
Supplemental agents	The number of times entries disconnected in a flow due to a system error. This column includes the percentage of system error disconnects compared with the total number of disconnects.
System Error Disconnect	The amount of time the agent has been in the current status.
Time in status	The duration of time until the conversation was abandoned.
Time to abandon	The length of time that elapsed from when a customer answered the call to when an agent answered the call, including call analysis. This column is empty if the call is in preview mode, transferred to the outbound flow, or gets disconnected or abandoned before an agent answers it.
Time to Agent	The length of time from when a customer answered the call to when the system transfers the call into an outbound flow. This column is empty if the call is in preview mode or if the call transferred to the queue.
Time to flow	The total amount of time interactions are in queue waiting for an agent to answer them before customers abandoned the interactions.
Total abandon	The total amount of time interactions are in the queue waiting for an agent to answer them before customers abandoned the interactions.
Total Abandon	The total time Genesys Cloud alerts agents before the agent accepts or declines an interaction.
Total Alert	The total number of seconds Genesys Cloud offered an agent an interaction before the agent declined the interaction or the interaction timed out.
Total Alert - No Answer	The total amount of time outbound interactions take to connect to the agent's phone. Usually, this duration is short. However, if the agent uses a remote phone the duration may be longer.
Total contacting	The total amount of time an outbound interaction spends dialing a contact.
Total dialing	The total amount of time an entry spent in a flow until it disconnected.
Total Disconnect	The total amount of time an entry spent in a flow until it exited the flow to another destination, such as an ACD queue, ACD voicemail, or user.
Total Exit	The total time entries spent in the flow.
Total Flow	The total amount of time agents spend on an interaction including time spent contacting, time spent dialing, talk time, hold time, and after call work.
Total handle	The total amount of time that interactions spent in IVRs.
Total IVR	The total amount of time spent interacting on all the conversations by the agent, within an interval. For example, in an interaction, where an agent accepts an interaction, talks to the customer for two minutes, places the customer on hold for one minute, and then talks to the customer again for two minutes, the Total Talk equals 4 minutes.
Total Talk	The total amount of time an interaction is in a queue before an agent answers it, it flows out, or the customer abandons it. Genesys Cloud calculates the wait time in milliseconds.
Total wait	The time spent in the Training status for the specified period.
Training	A measurement of the number of interactions an agent answered in one queue and then transferred. A transfer counts for the queue in which an agent answers the interaction. This measurement is calculated by the number of interactions blind transferred or consult transferred.
Transfer	The number of transfers compared to the total number of interactions answered. Calculated by: (# of transfers / Interactions Answered) * 100
Transfer %	Trunk load is a time-related metric that includes all components of a voice interaction, other than the after-call work which does not require a circuit. Trunk load = Ring + AttendantIVR + Assignment + Talk Time
Trunk load	The number of times an entry exited a flow to a user. Includes the percentage of user exits compared with the total number of exits.
User Exit	The number of times an entry exited a flow to a user's voicemail. Includes the percentage of user voicemail exits compared with the total number of exits.
User Voicemail Exit	The number of interactions that waited in the queue.
Waiting	A derived metric of the total count of unique interactions being worked by an agent within a time period. Calculated by: Unique Interactions Holding + Talking + ACW.
Working Interactions	

[1] Discussion required to know if VA is built on Genesys, DFCX or another Agentic AI
